SUMMARY

Computer Science undergraduate interested in backend engineering, distributed systems, AI infrastructure, and scalable software development. Experience building production-grade applications using Python, Java, FastAPI, React, PostgreSQL, Docker, vector databases, and real-time AI systems.

EDUCATION

Amrita Vishwa Vidyapeetham, Coimbatore

2023 – 2027

Bachelor of Technology in Computer Science and Engineering
CGPA - 8.47

SKILLS

Languages: Java, Python, C, JavaScript, TypeScript, SQL

Frameworks: React, Next.js, FastAPI, Express

Databases: PostgreSQL, MongoDB, ChromaDB

Tools: Git, Docker, Linux

Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

Visteon Corporation – Visteon Scholar

Jan 2026 – Present

- Selected among students nationwide for Visteon's industry mentorship program focused on automotive software systems.
- Worked with embedded C, ECU architectures, system-level debugging, and automotive software development practices.

PROJECTS

Scaler AI Portfolio Agent 

Next.js, React, TypeScript, FastAPI, Python, ChromaDB, Gemini, Vapi, Deepgram, ElevenLabs, Docker

- Architected a dual-modality AI agent supporting real-time voice interactions and streaming web chat using Gemini, Vapi, Deepgram, and ElevenLabs.
- Developed a Retrieval-Augmented Generation (RAG) pipeline using FastAPI and ChromaDB to index resume and GitHub repositories, enabling semantic retrieval and grounded LLM responses.
- Optimized voice-agent scheduling latency from ~4s to under 100ms using caching and revalidation strategies, eliminating third-party webhook timeout failures.

Amazon Intent-to-Cart Shopping Assistant 

Next.js, React, Gemini API, TypeScript, Vercel

- Built a multimodal commerce platform that transforms text, voice, and image inputs into personalized shopping carts through AI-driven intent understanding.
- Developed image-to-cart and multilingual voice-to-cart workflows using Gemini multimodal capabilities to extract shopping intent and generate contextual product recommendations.
- Designed an intent orchestration pipeline combining user context, recommendation logic, and cart generation to automate end-to-end shopping workflows.

RISKOFF – AI-Driven FinTech Risk Platform 

React, FastAPI, PostgreSQL (Supabase), Docker, Gemini API, Python

- Developed an AI-powered financial risk assessment platform using React, FastAPI, PostgreSQL, and Docker to automate loan-risk evaluation workflows.
- Built backend services for financial analysis, risk scoring, authentication, and secure API communication across multiple application modules.
- Containerized backend infrastructure using Docker, enabling reproducible development environments and streamlined deployment workflows.

PUBLICATIONS

A Data-Driven Machine Learning Framework for Forest Fire Prediction in the Satpura Region

PEIS 2026, NIT Uttarakhand (Springer)

ACHIEVEMENTS

National Semi-Finalist - Flipkart GRID 7.0
